

A large container ship is shown from a low angle, sailing on the water. The ship's hull is dark grey, and its upper section is covered in stacks of colorful shipping containers in shades of green, blue, and red. The ship is moving towards the right, leaving a wake in the water. The background features a calm sea and a distant shoreline under a warm, orange-hued sky, suggesting a sunset or sunrise.

kubefirst workshop

#islamabad-workshop

**kubefirst.github.io/
workshops**

prerequisites

1. Docker Desktop
2. kubefirst CLI (`brew install kubefirst/tools/kubefirst`)
3. GitHub token set as environment variable *GITHUB_TOKEN*
4. Flappy-kray.yml at `github.com/kubefirst/workshops/`

<https://docs.kubefirst.io/2.0/kubefirst/local/github/install#prerequisites>

kubefirst delivers instant GitOps platforms
so you can have the most popular open
source tools working together in minutes
on a new Kubernetes cluster.

First, select your preferred Git provider

 **GitHub**

 **GitLab**

Now select your cloud adventure

 **AWS**
Our AWS cloud platform can accommodate all of the needs of your enterprise and leverages the free Github system at github.com.

 **Civo**
The cloud native service provider, specializing in managed Kubernetes. A faster, simpler and more cost-effective cloud platform. [Learn More](#)

 **DigitalOcean** BETA
A cloud platform that allows developers to build, deploy, and scale applications. Its simplicity, ease of use and affordable pricing make it a popular choice for small businesses and startups. [Learn More](#)

 **Vultr** BETA
A cloud hosting provider that offers high-performance SSD-based cloud servers, block storage, object storage, and dedicated servers in multiple locations worldwide. [Learn More](#)

All

 **Argo-Events** [Queueing](#)

Argo Events is an event-driven workflow automation framework for Kubernetes which helps you trigger K8s objects, Argo Workflows, Serverless workloads, etc. on events from a variety of sources like webhooks, S3, schedules, messaging queues, gcp pubsub, sns, sqs, etc

[Add](#)

 **Datadog-Agent** [Monitoring](#) [Observability](#)

Datadog's SaaS-based infrastructure monitoring provides metrics, visualizations, and alerting to ensure your engineering teams can maintain and optimize your cloud or hybrid environments.

[Add](#)

 **Kratix** [Application Management](#)

Kratix is a framework used by platform teams to build the custom platforms tailored to their organisation.

 **Argo-Rollouts** [Continuous Delivery](#)

Argo Rollouts is a Kubernetes controller and set of CRDs which provide advanced deployment capabilities such as blue-green, canary, canary analysis, experimentation, and progressive delivery features to Kubernetes.

[Add](#)

 **Goldilocks** [Monitoring](#)

Goldilocks is a utility that can help you identify a starting point for resource requests and limits.

[Add](#)

 **Kubernetes-Dashboard** [Observability](#)

Kubernetes Dashboard is a general purpose, web-based UI for Kubernetes clusters. It allows users to manage

 tharper

workshop

1. **Creating a k3d (local) Kubernetes cluster**
2. **Learning the gitops repository structure**
3. **Managing your repositories using Terraform & Atlantis**
4. **Understanding users & secrets management with Vault**
5. **Exploring Argo CD by installing a new application to the cluster**
