Your developers documentation is an integral part of your product: one cannot exist without the other.

- **Frédéric Harper**

*yes, I'm quoting myself*

Your developers documentation is an integral part of your product: one cannot exist without the other.

- **Frédéric Harper**

**benefits**

**Sarah**<sup>TM</sup>

@LadyBluenotes

Some documentation is so bad it almost puts me off wanting to use whatever it is I'm looking for.

But sometimes.... I can't just move on to another thing 🗨️

1:56 PM · Feb 5, 2023

**Brian P. Hogan**

@bphogan

I am in the foulest of foul moods.

I have attempted to get local versions of three open source learning management systems running locally by following their docs, and they all failed.

Every single one.

Bad documentation wastes so much time.

# Using TinyMCE from Tiny Cloud in React

This guide shows how to integrate TinyMCE from Tiny Cloud into a React application using the [TinyMCE React component](#).

## Prerequisites

This procedure requires [Node.js \(and NPM\)](#).

## Procedure

1. Use [Vite](#) and [React SWC](#) to create a new React project named `tinymce-react-demo`.

```
# NPM 7+, extra double-dash is needed
npm create vite@5 tinymce-react-demo -- --template react-swc
```

2. Navigate to the project directory and install `@tinymce/tinymce-react`

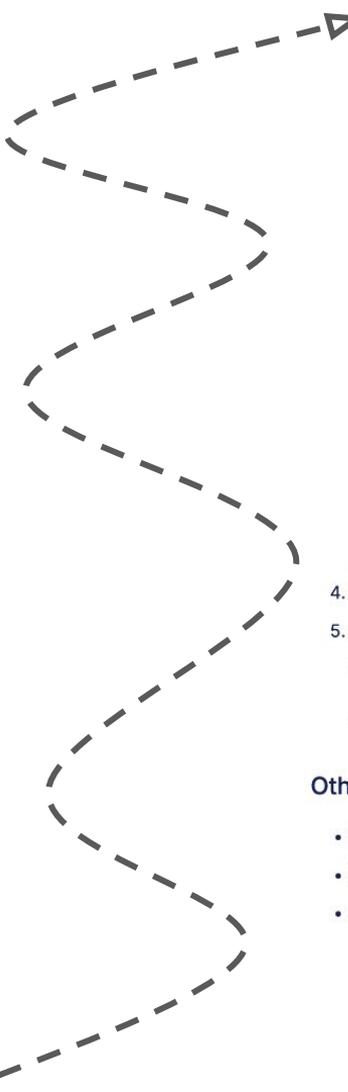

```
cd tinymce-react-demo && npm install @tinymce/tinymce-react
```

3. Update `App.jsx` to include `Editor` from `tinymce/tinymce-react` as below.

```
import { useRef } from 'react';
import { Editor } from '@tinymce/tinymce-react';
import './App.css';

export default function App() {
  const editorRef = useRef(null);
  const log = () => {
    if (editorRef.current) {
      console.log(editorRef.current.getContent());
    }
  };

  return (
    <>
```

```
<Editor
  apiKey='no-api-key'
  onInit={ (_evt, editor) => editorRef.current = editor }
  initialValue="<p>This is the initial content of the editor.</p>"
  init={{
    height: 500,
    menubar: false,
    plugins: [
      'advlist', 'autolink', 'lists', 'link', 'image', 'charmap',
      'anchor', 'searchreplace', 'visualblocks', 'code', 'fulls',
      'insertdatetime', 'media', 'table', 'preview', 'help', 'w
    ],
    toolbar: 'undo redo | blocks | ' +
      'bold italic forecolor | alignleft aligncenter ' +
      'alignright alignjustify | bullist numlist outdent indent
      'removeformat | help',
    content_style: 'body { font-family:Helvetica,Arial,sans-ser
  }}
  />
<button onClick={log}>Log editor content</button>
</>
);
}
```

4. Update the `apiKey` prop with your [Tiny Cloud API key](#).
5. Run the development server to test the application:

```
npm run dev
```

103         }
104         return $return_string ? implode($separator, $rgb
105
106 // Draw the image
107 if ( isset($_GET['c'])
```

**UPDATE**

The word "UPDATE" is rendered in large, bold, black 3D block letters. The letters are positioned on a bright yellow surface, and a strong light source from the upper left casts long, dark shadows to the right and slightly forward, giving the letters a sense of depth and three-dimensionality. The background is a solid, vibrant yellow that transitions to a darker shade towards the top edge of the frame.

**Brian P. Hogan**

@bphogan

Docs get out of date with the codebase because product does not integrate the docs into the release schedule.

Very few places will let docs block a product release. And if product allows changes right up till release day, docs will always trail.

 tinyMCE

The world's most trusted rich text editor,  
easily upgraded and infinitely scalable.

Familiar. Fully-featured. Mobile optimized.

With an open source codebase, unparalleled developer support,  
structure and performance, you can rely on TinyMCE when  
you need the best of both worlds.

Use TinyMCE as:

- A rich text editor
- An advanced editor
- An open source editor
- A complete content editor
- A simple content editor

Need more rich text editing functionality?

Upgrade the TinyMCE core with our editor suite functionality.
